ADVERSE DRUG REACTION (ADR) REPORTING FORM

SECTION 1 — PATIENT INFORMATION

Patient Initials	R.R.	**Age**	28 years
Sex	☑ Female ☐ Male	**Weight**	58 kg
Medical History	No known drug allergy		

SECTION 2 — DETAILS OF ADVERSE DRUG REACTION (ADR)

Description of ADR	Red, itchy skin rashes over the arms and chest accompanied by mild facial swelling		
Time of Onset	After the 3rd dose of amoxicillin	**Seriousness**	☑ Hospitalization ☐ Death ☐ Life-threatening ☐ Disability ☐ Congenital Anomaly
Outcome	Completely recovered after 2 days		

SECTION 3 — SUSPECTED MEDICINE

Suspected Drug	Amoxicillin	**Indication**	Bacterial throat infection
Dose	500 mg	**Route**	Oral
Frequency	Three times daily	**Prescribed Duration**	5 days
Treatment Started	Date not specified	**Treatment Stopped**	Same day as ADR onset
Action Taken	Amoxicillin discontinued		

SECTION 4 — OTHER MEDICINES

Concomitant Medicines	None reported

SECTION 5 — MANAGEMENT OF ADR

Treatment Given	Antihistamine		
Dechallenge	Positive — symptoms improved after stopping amoxicillin	**Rechallenge**	Not per formed

SECTION 6 — CAUSALITY ASSESSMENT

Naranjo Score	7	**Naranjo Categor y**	Probable
WHO-UMC Causality Category	Probable/Likely		

SECTION 7 — REPORTER INFORMATION

Reporter Qualification	Healthcare Professional	**Repor ting Date**	Not specified

CASE SUMMARY

> A 28-year-old female weighing 58 kg developed red, itchy skin rashes over her arms and chest with mild facial swelling after taking the third dose of amoxicillin 500 mg orally three times daily for a bacterial throat infection. She was hospitalized, amoxicillin was discontinued, and an antihistamine was administered. Her symptoms completely resolved after 2 days. Rechallenge was not performed. The ADR was assessed as probable according to the Naranjo Algorithm and probable/likely according to the WHO-UMC system.
